

Electrify your career.

Not a day goes by in which we do not use batteries, from small appliances (shaver, smartphone, drone, laptop, etc.) to large machines and devices (electric bicycle, scooter, car, bus, etc.). With the rapid rise of mobile electrical solutions and the introduction of battery technology into our electrical grid, the need for battery professionals has grown exponentially.

Battery Technician

**AVERAGE
BATTERY TECHNICIAN
SALARY
IS
\$22/hour**

Battery Technician certification focuses on the new skills that are needed for designing, operating, testing, maintaining, and replacing battery cells and packs for various applications. You will learn about Battery Management systems, the charging and maintenance of batteries, and their recycling process. We will also spend significant time on the safe handling of electrical components in relation to battery technology, both for humans and for the environment.

Whether you are a renewable energy installer, a mechanic working with electric vehicles, an electrical engineer, an electronics specialist, or someone who is looking for a similar career, Battery Technician training will allow you to acquire a sound knowledge of batteries, battery technologies, and applications. It will also prepare you to operate battery systems.

Battery Technician

EMPOWERS LEARNERS

- Evaluate what battery technology is best suited for which application, based on its characteristics
- Analyze advantages and disadvantages of the most frequently used battery technologies
- Design and implement the best fit battery solution for each application
- Safely handle, test, repair, and dispose of battery systems, complying with legal and environmental standards

COST
\$500.00
 per learner

DURATION
8 Weeks

DELIVERY MODE
Online,
asynchronous
